PROJECT MANAGEMENT

Github
CircleCI
Jira
Trello
Slack

- Work on Salecycle JS (core) infrastructure and liaise with implementation teams on integrations.
- Write internal engineering tools in Electron, Chrome & testing (cucumber & mocha derived) modules to be used by different teams in business.
- Contribute to micro services written in NodeJS, which talk to multiple services hosted on AWS (such as kinesis)
- Embrace TDD and write documentation around front end & back end services.
- Write client implementation scripts occasionally and make sure they are fail proof by involving support teams.
- For a brief period of time, I also worked as analyst programmer to derive reports from raw data. Which was used by sales/account services in the region.
- As a member of the product team in the region, be a go to person for various product related support.

GNOSSSEM | Senior Web Developer

NOV 2012 – JUN 2014 | Singapore

- Built the whole platform from scratch using Ruby on Rails. While maintaining existing schema, with improved performance.
- Developed the ecommerce website as per international standards with improved user experience. In a short period the sales numbers and page-visits had doubled.
- Consistent R&D efforts to bring new technologies to existing site in order to bring an edge, when compared to all other online stores.
- Project Management and chart out future plans for the website, ex: Mobile App, Social selling, Fitting area.
- Recruited and trained 2 developers to work on the current architecture.

IBM India | IT Analyst

OCT 2010 – APR 2011 | Singapore

- Maintain and optimize crucial software services for Carphone Warehouse UK (running on IBM servers).
- Liaising with 2nd level support or Incident Management team to mitigate major issues and get it resolved as per promised SLA's.
- Validating system and application availability.
- Learn supported technologies and develop skills required to support the efforts of department.
- Share communications and technical documentation with the group.
